

**AINet ANT-X
AI Prize Challenge
23 July 2021**

Operational Context:

Understanding the battlespace is critical to Naval operations in a contested, all-domain battlespace. Naval and Joint Forces must have situational awareness including identification of all forces in surface and air domains in order to operate freely.

In this Challenge, the following data will be available:

Set 1. Airtracks, seatracks, optaskVI

These data sets will enable teams to identify patterns of life and context for the patterns of life. This information can be used to recommend higher order courses of action, but Teams are also encouraged to explore and propose other solutions that would be useful in the given operational context.

A sample description of air tracks data is available in the Q&A.
